

INNOVATION ScriptCenter®

ScriptCenter & Innovation's PharmASSIST Symphony connected integration streamlines pharmacy workflow with one centralized solution

- Preparing prescription fills for loading into ScriptCenter is integrated into the normal Symphony workflow, allowing staff to follow their typical workflow while making ScriptLinking a built-in part of the process
- Tracking prescription lifecycle through preparation, loading, and pickup is performed within the Symphony user interface, bringing complete visibility for both conventional will call and ScriptCenter pickup in the same single pane view
- Prescription dispensing is automatically performed by Symphony for all items picked up in ScriptCenter

ScriptCenter meets high-level security requirements

Asteres holds a DHA RMF ATO accreditation at the MAC III Sensitive level for the ScriptCenter system. This accreditation allows ScriptCenter to be connected to the facility or MedCOI network.

ScriptCenter systems receive prescription data from MHS GENESIS, CHCS, or Innovation's Symphony to enable prescription preparation and pickup.

Integrated pharmacy workflow

ScriptCenter bi-directional MHS GENESIS connection exists through the interface with Symphony

- MHS GENESIS data can be retrieved by ScriptCenter from Symphony
- Ability to automatically change a status in Symphony of a prescription to "picked up" when a prescription is retrieved out of ScriptCenter
- Signature capture is sent to Symphony, providing a complete fulfillment record in a single system
- Overall reduction of manual input or manual data transfer
